On December 29, 2010, following heavy rain throughout December, the roadway became saturated and failed at this location. Initial allocation was to provide traffic control as necessary; stabilize roadway slope; reconstruct roadway fill, side slopes and shoulders; and repair drainage system. This supplemental is necessary to repair additional damage caused by March 2011 storms. Due to heavy rainfall in March 2011, the ground became saturated resulting in a 760-foot long roadway slip out with scarps crossing the roadway at both ends of the slip out. The initial project included reconstructing the roadway, installing metal beam guardrail and erosion control. This supplemental allocation is due to differing site conditions during construction resulting in the use of different retaining wall system. The structure is being monitored 24 hours a day for movement. Initial allocation was to add additional piles, pile cap and new seal coarse at Pier 22. A temporary coffer dam and a trestle will be needed to provide access to the site. This supplemental allocation is necessary to protect other piers (19, 20, and 21) due to changing river dynamics and potential for extensive river bank erosion.
